Plan A: Modeling Lia

Modeling Lia Stylized

Some reference of the idea:

Plan B: Modeling Lia

Add complements to the design like a beach volleyball environment

Calendar

- April:

- Week 1: Sketching
- Week 2: Base Modeling
- Week 3: Model Refinement
- Week 4: Sculpt and UV

- May:

- Week 5: Polish modeling, Texturing and Materials
- Week 6: Lighting and Rendering
- Week 7: Final Review and Adjustments

Result

[Fs&ab_channel=EmeUve](#)

Cat Hair in Blender

+ viewport shading

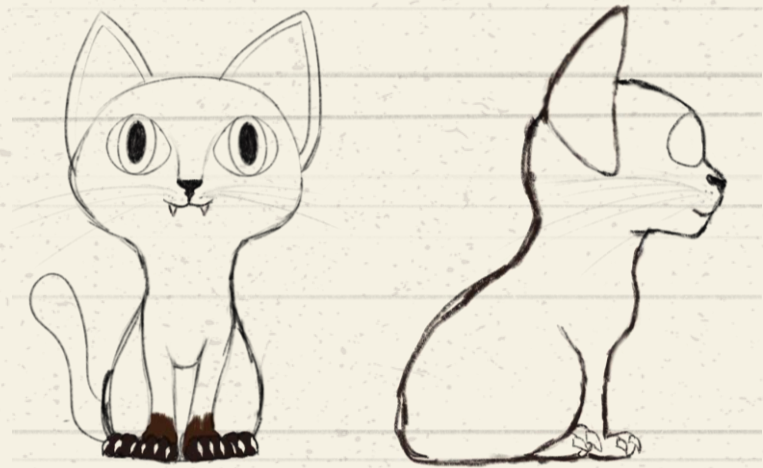

Sketching

Some sketching of Lia's proportions and what I wanted to highlight in the stylized version.

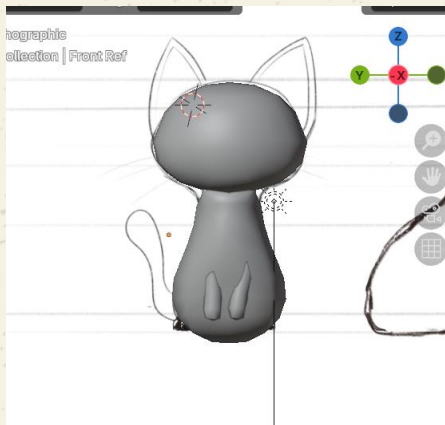

Turn around I would used for Lia's modeling

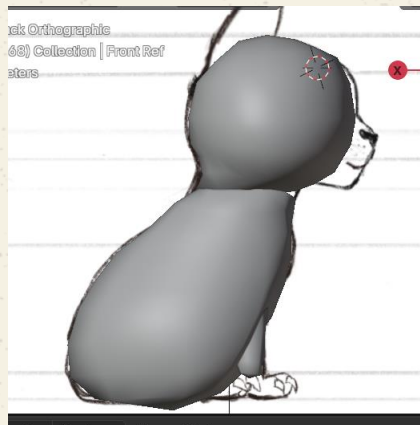

Modeling in Blender

For each part of the body I'm using a Cube with subdivision and after having more or less the shape I use Auto Smooth to avoid the polygons

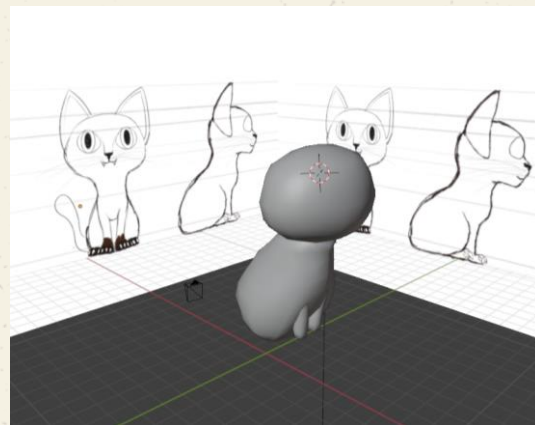

Front

Side

3/4

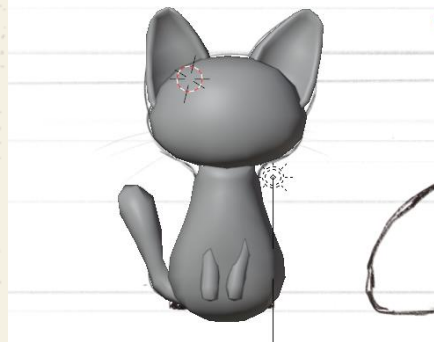

As the Main body, legs and head have different hair, they are modelled in different objects

Modeling in Blender

Main body + Ears + Tail

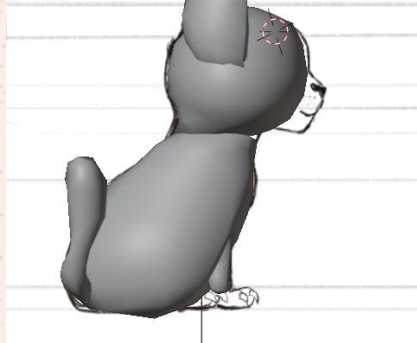

Front

Left Orthographic
(1.68) Collection | Claw6
Meters

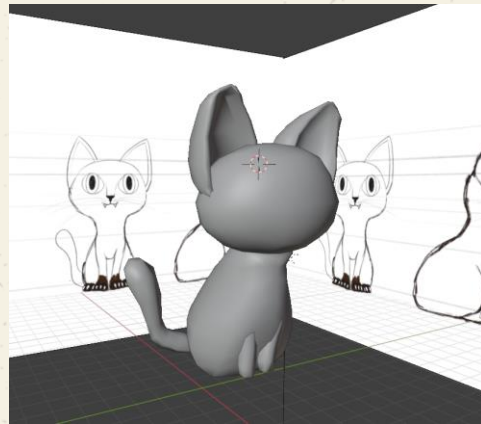

Side

Back Orthographic
(1.68) Collection | Claw6
Meters

3/4

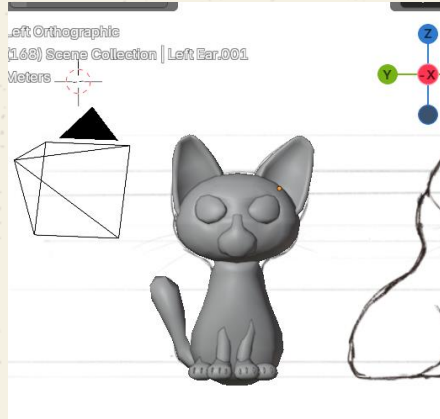

- Hair and Tail different Hair

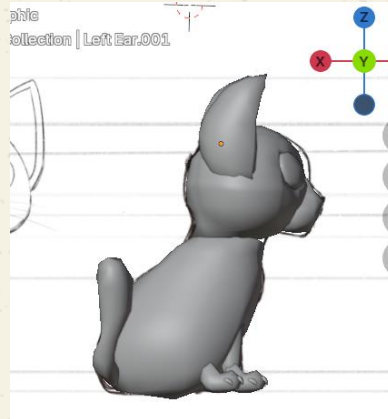

Modeling in Blender

Main body + Ears + Tail + Paws + Snout + Eyes

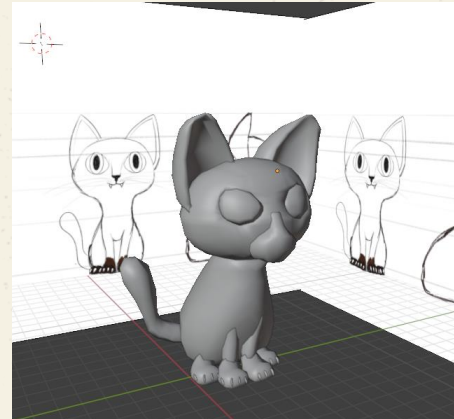

Front

Side

3/4

- Paws and Snout Different hair

First Test Render

- *Render in Cycles*
- *Without eyes*

Observations:

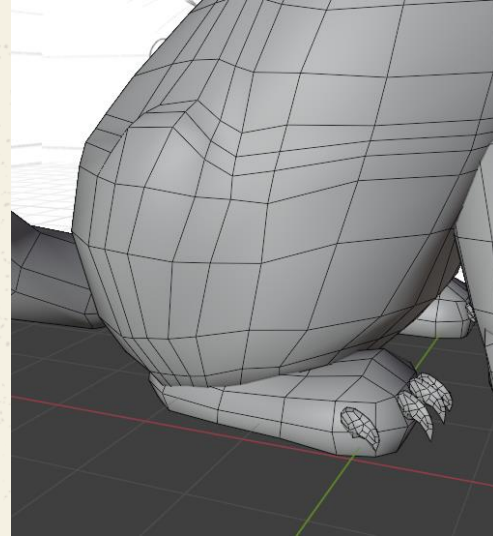

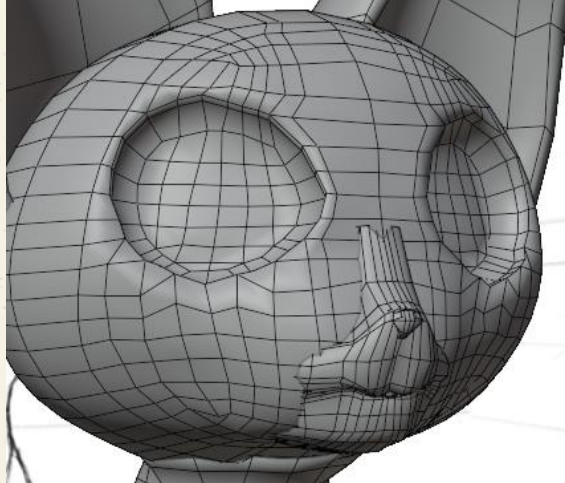

- *There are some polygons so I need to do more loops and smooth that shrapness.*
- *Legs are too much inside of the main body*

Modeling in Blender

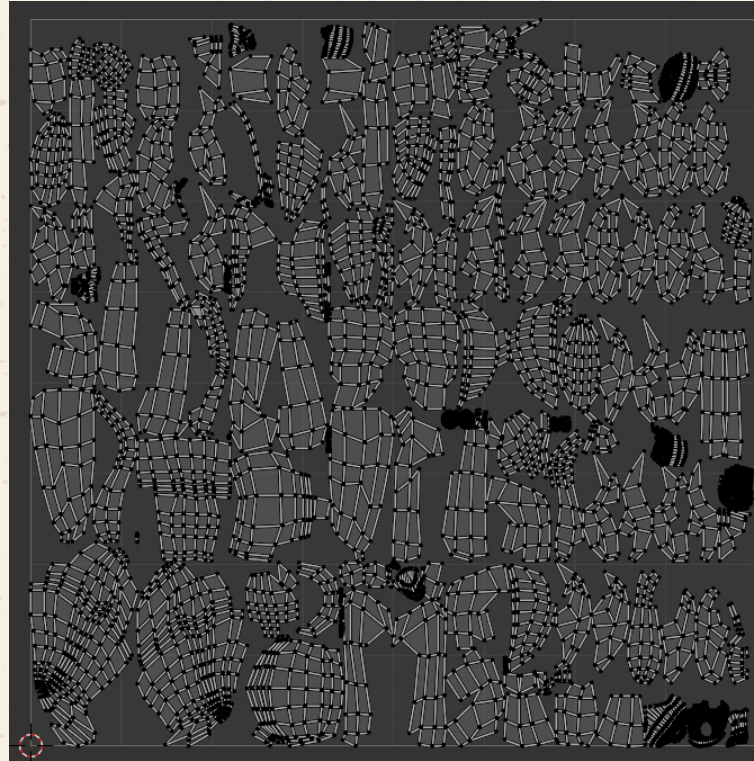

Improvements:

- Lump of the back legs
- Make the eye hole in the head
- Improve the snout shape with mouth

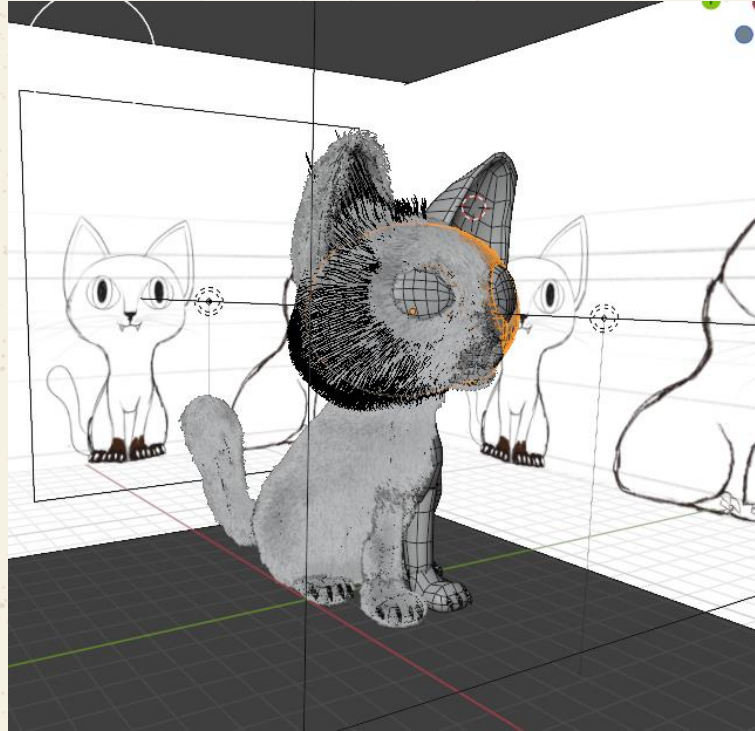

UV Mapping

- As there are in different objects, I selected all the objects
- Click U
- Unwrap -> Smart UV Project

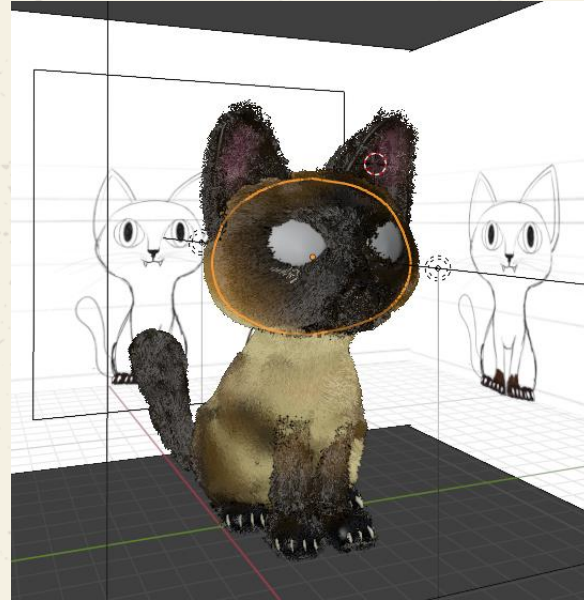

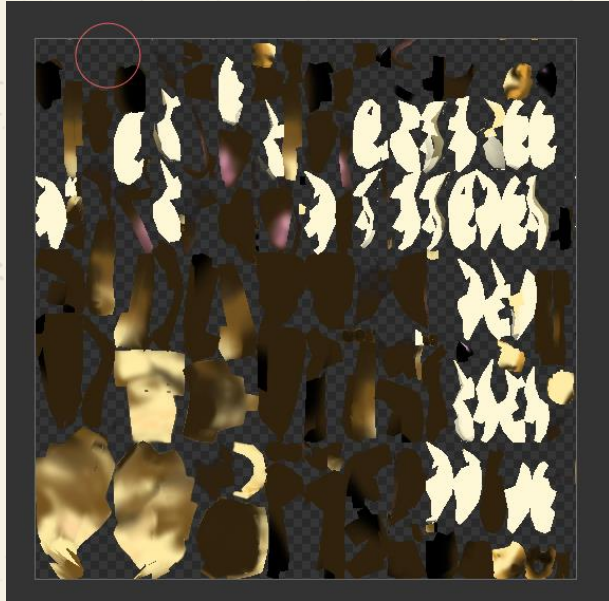

Particle edit

With Lia's reference, I started to edit the hair to make it similar to her hair in the Particle Edit Mode

Texturing

Making the first try of texturing with the Uvs made before

Second Test Render

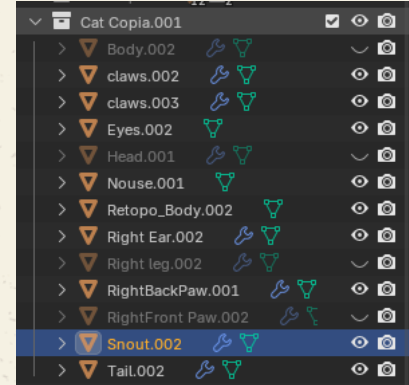

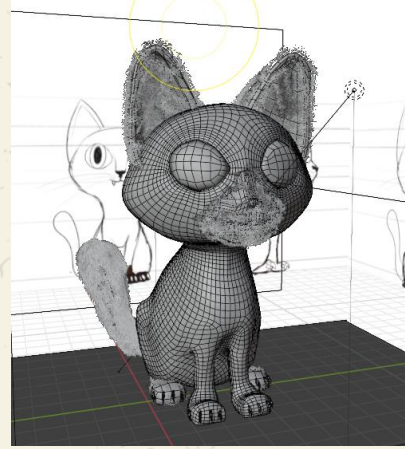

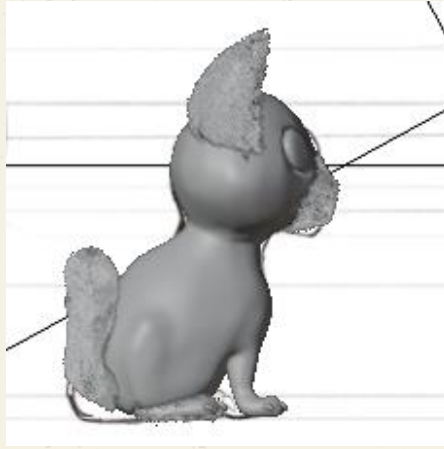

Observations:

- The hair in the ears didn't match with my stylize idea
- The eyes didn't look realistic, need some spotlight inside
- Too much hair around the eyes.
- The parts are not very good connected so I have to join them and remesh.

Modify and Mesh

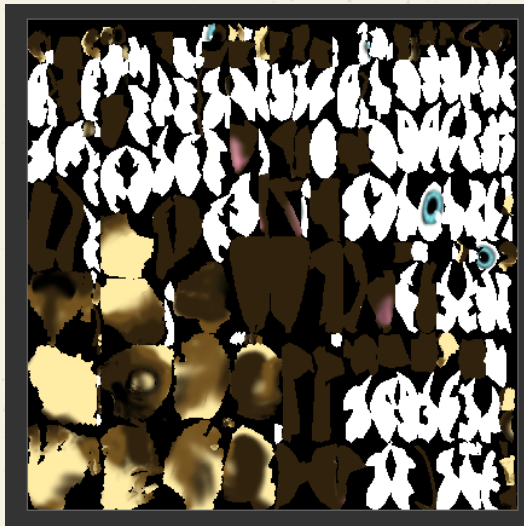

Using this tutorial to joining the objects and remesh:

https://www.youtube.com/watch?v=H155hZACwFk&ab_channel=%C2%A1Huisano%21

Second Test Render- EEEVEE

Renderign with EEEVEE because y
cycles I had many problems with
the rendering of the hair due to
the noise of the particles

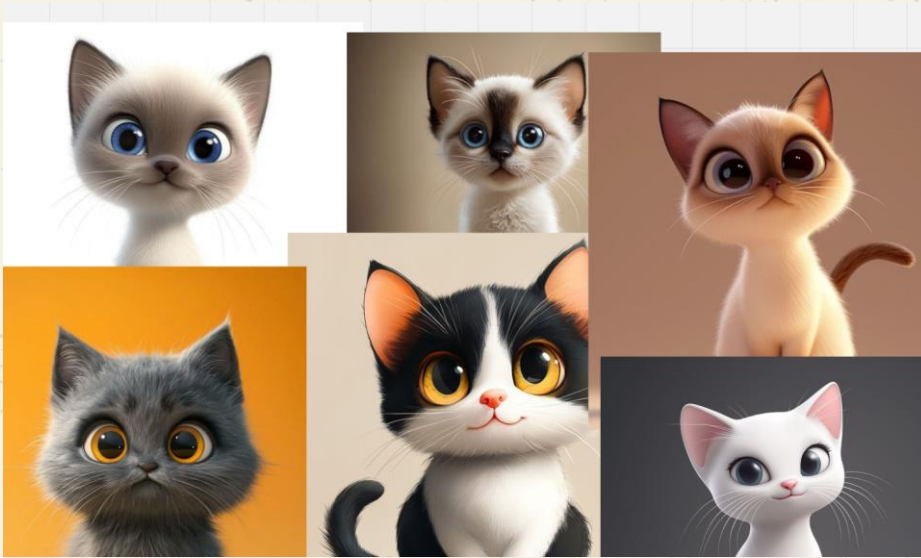

Obeservations:

- Eyes too much outside from the head, gaving a scared appearance
- Eyes, snout and claws are different objects and they are in the same Uvs map; make in a separate map
- Give some brightness around the nouse to make it more noticeable

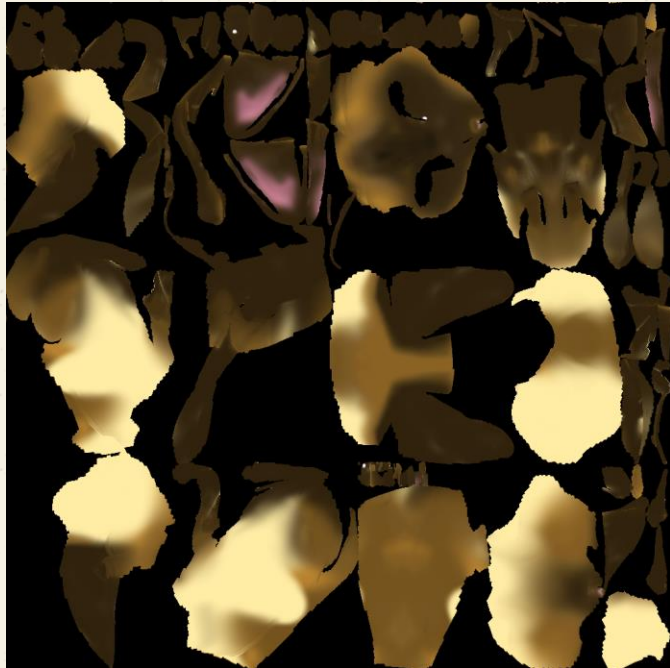

Eyes Modeling

Eyes reference

Render 3

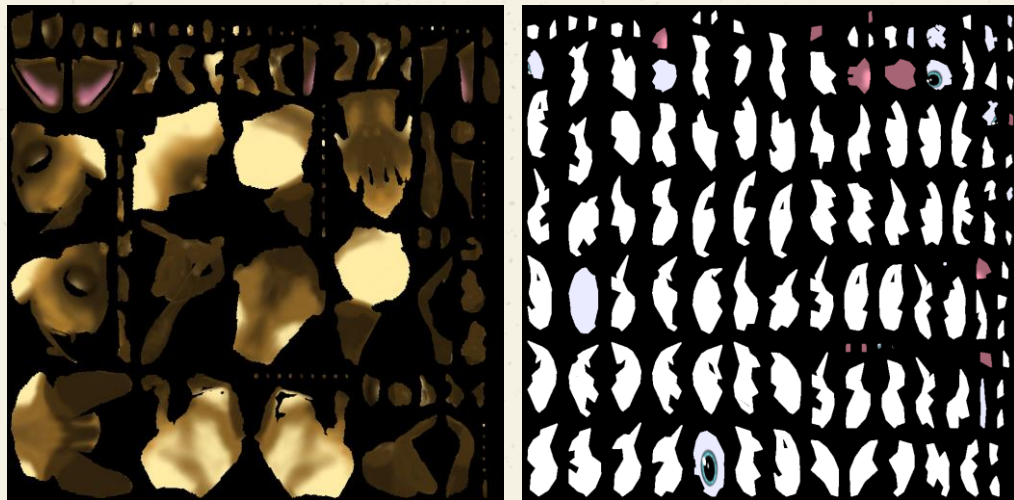

Very little space between the UV so I had some issues painting as we can see in the Lia's left front foot

Render 4: EEVEE

Improvements:

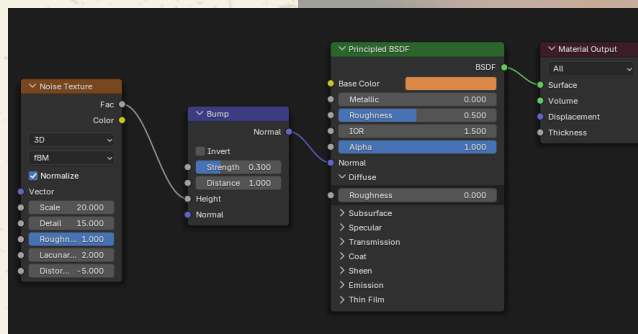

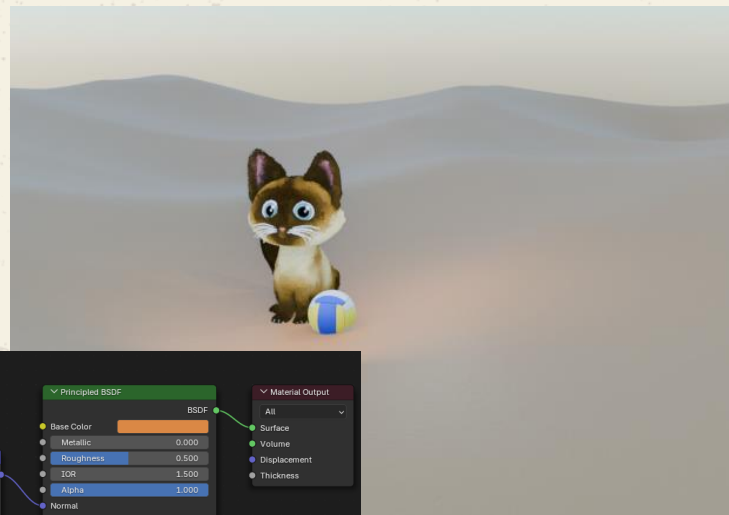

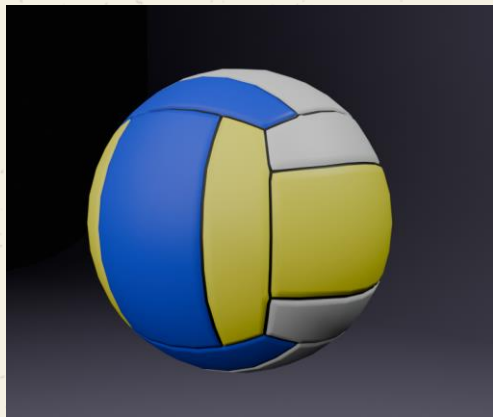

- Added whiskers with Smooth Hair Curves
- Change the nose color to make it more noticeable
- New UV mapping with more space between them
